# QUALIZEAL

# Why Are Organizations Moving To
# DevSecOps?

# Faster Time To Market

By integrating security practices into the development process, organizations **can release software faster**, as they don't have to wait for security testing to be completed before releasing the software.
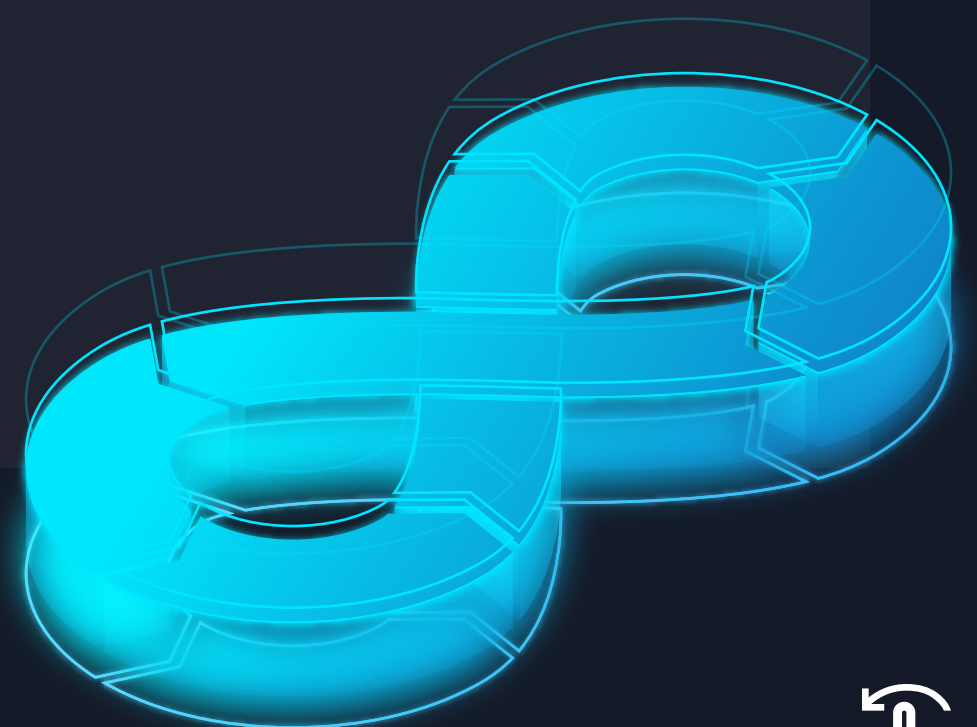

# Improved Security

By including security testing and other security practices in the development process, organizations **can identify and fix security issues early on**, which can improve the overall security of the software.

# Increased Efficiency

By integrating security practices into the development process, organizations **can avoid the need for separate security teams**, which can improve collaboration and communication among development, security, and operations teams.

# Enhanced Compliance

By incorporating security practices into the development process, organizations **can better meet regulatory and compliance requirements**, which can reduce the risk of fines and other penalties.
